

West African Crime Corrected

Stella Oladele Project 1 Corrected

Introduction ## This project analyses major crime data from selected cities in West African countries collected in 1974. Using R, I created and explored vectors containing the countries, cities, and number of crimes. I then organized the data into a data frame, calculated the total number of crimes, classified cities according to their crime rates, and compared crime totals between countries. To approach this we make use of Base R function and dplyr package()

Figure 1: crime rate

Figure 2: crime rate

```
# Question 1a  
# Create a vector containing all countries shown in the table 1  
# Table 1: Count of the number of crimes in cities in West African
```

```

## Using dplyr
```

```
crime_data |>
  summarize(
    .by = country,
    total_crime = sum(n_crime),
    average_no_of_crime = mean(n_crime)
  )
```

	country	total_crime	average_no_of_crime
1	Nigeria	1453	85.47059
2	Cameroon	173	57.66667

```
crime_data |>
  summarize(
    .by = country,
    total_crime = sum(n_crime),
    average_no_of_crime = mean(n_crime)
  ) |>
  top_n( n = 1, wt =total_crime)
```

	country	total_crime	average_no_of_crime
1	Nigeria	1453	85.47059
